

HOW TO INSTALL LIGHTROOM PRESETS

DESKTOP

Lightroom Classic

Unzip files and locate the 'XMP' folder. Open Lightroom and go to the 'Develop' window, click the plus sign on the presets panel then click 'import presets' navigate to the XMP folder and highlight all of the presets and click 'import'

Lightroom

Unzip files and locate the 'XMP' folder. Open Lightroom, click the Edit panel then click the Presets button to open the presets menu. Click the three dots and then click 'import presets' navigate to the XMP folder and highlight all of the presets and click 'import'

Note : Please ensure that 'Show Partially Compatible Presets' is selected if your presets aren't showing up.

MOBILE

Please follow the video guide - <https://youtu.be/fQCGrJR2PSE>

Or :

Download the zip file from Safari / Chrome and save it into 'files' on your device, locate the zip folder on your files app then hold your finger on the folder to 'uncompress' it. Go to the open folder and locate the 'Mobile - DNG' folder. Highlight all the DNG files and tap the share button, then select Lightroom, then tap 'Launch Lightroom Now'

Tap one of the images then press the three dots at the top right of the screen, then click 'Create Preset'. Name the preset the same as the image, and underneath that tap 'Create New Preset Group' and name it Byte Review PP. Next, ensure the 'Optics' box is ticked on for both, then tap the tick at the top right to confirm.

Repeat step 2 for all the other preset images and ensure to add them all to the same Byte Review PP folder.
